

UNIVERSITY OF IOWA CHOOSES CSI SOFTWARE

Houston, TX - Feb 21, 2006 The University of Iowa in Iowa City, IA, has selected CSI Software for its recreation needs. The university will be using Member Management, Facility Access, Point of Sale, Inventory, Locker Management, Equipment Checkout, and Scheduler. Initial plans call for the software to be installed at the tennis center as the new recreation center is being built.

The University of Iowa (UI) has plans to move several of its facilities to make room for a new recreation center. The East Campus Recreation Center/Field House Renovation project will construct a 150,000-gross-square-foot indoor recreation facility and renovate UI's Field House. The project is estimated to cost \$55 million, which will be funded by the sale of revenue bonds to be supported by student fees and non-student user fees. A number of university structures and an 84-vehicle parking lot are currently at the selected site.
